

Charity Shrine

CHARITY MANAGEMENT SYSTEM

Abstract

- Donating to the causes not only benefits the charities themselves but it can deeply be rewarding for the giver too.
- Gone are the days when one had to go door to door collecting pledges or donating items.
- To overcome these issues, venturing into online charity with this system may give a struggling non-profit the publicity and fundraising boost it needs.
- This web application aims at providing monetary and material aid to non-governmental organizations.
- It focuses to help society by closing the gap in terms of quality of life for the less fortunate people and create a sense of solidarity.

Introduction

- A donation is a gift for charity, humanitarian aid, or to benefit a cause. A donation may take various forms, including money, alms, services, or goods such as clothing, toys, food, or vehicles.
- A donation may satisfy medical needs such as blood or organs for transplant. Charitable donations of goods or services are also called gifts in kind.
- Donations are given without return consideration. This lack of return consideration means that, in common law, an agreement to make a donation is an "imperfect contract void for want of consideration."

Problem Definition

- During pandemic, financial instability kicked in and the movement of people were restricted. In such times, the best way to help the needy is online charity.
- During economic downturns, many non-profit organizations see their funding dry up.
- Our system enables individuals to donate items conveniently to any cause they care about.

2021.

Objective

- To help people by donating things.
- Management and distribution of contributions to all needy and low-income families.
- Speeding up the practical procedures.

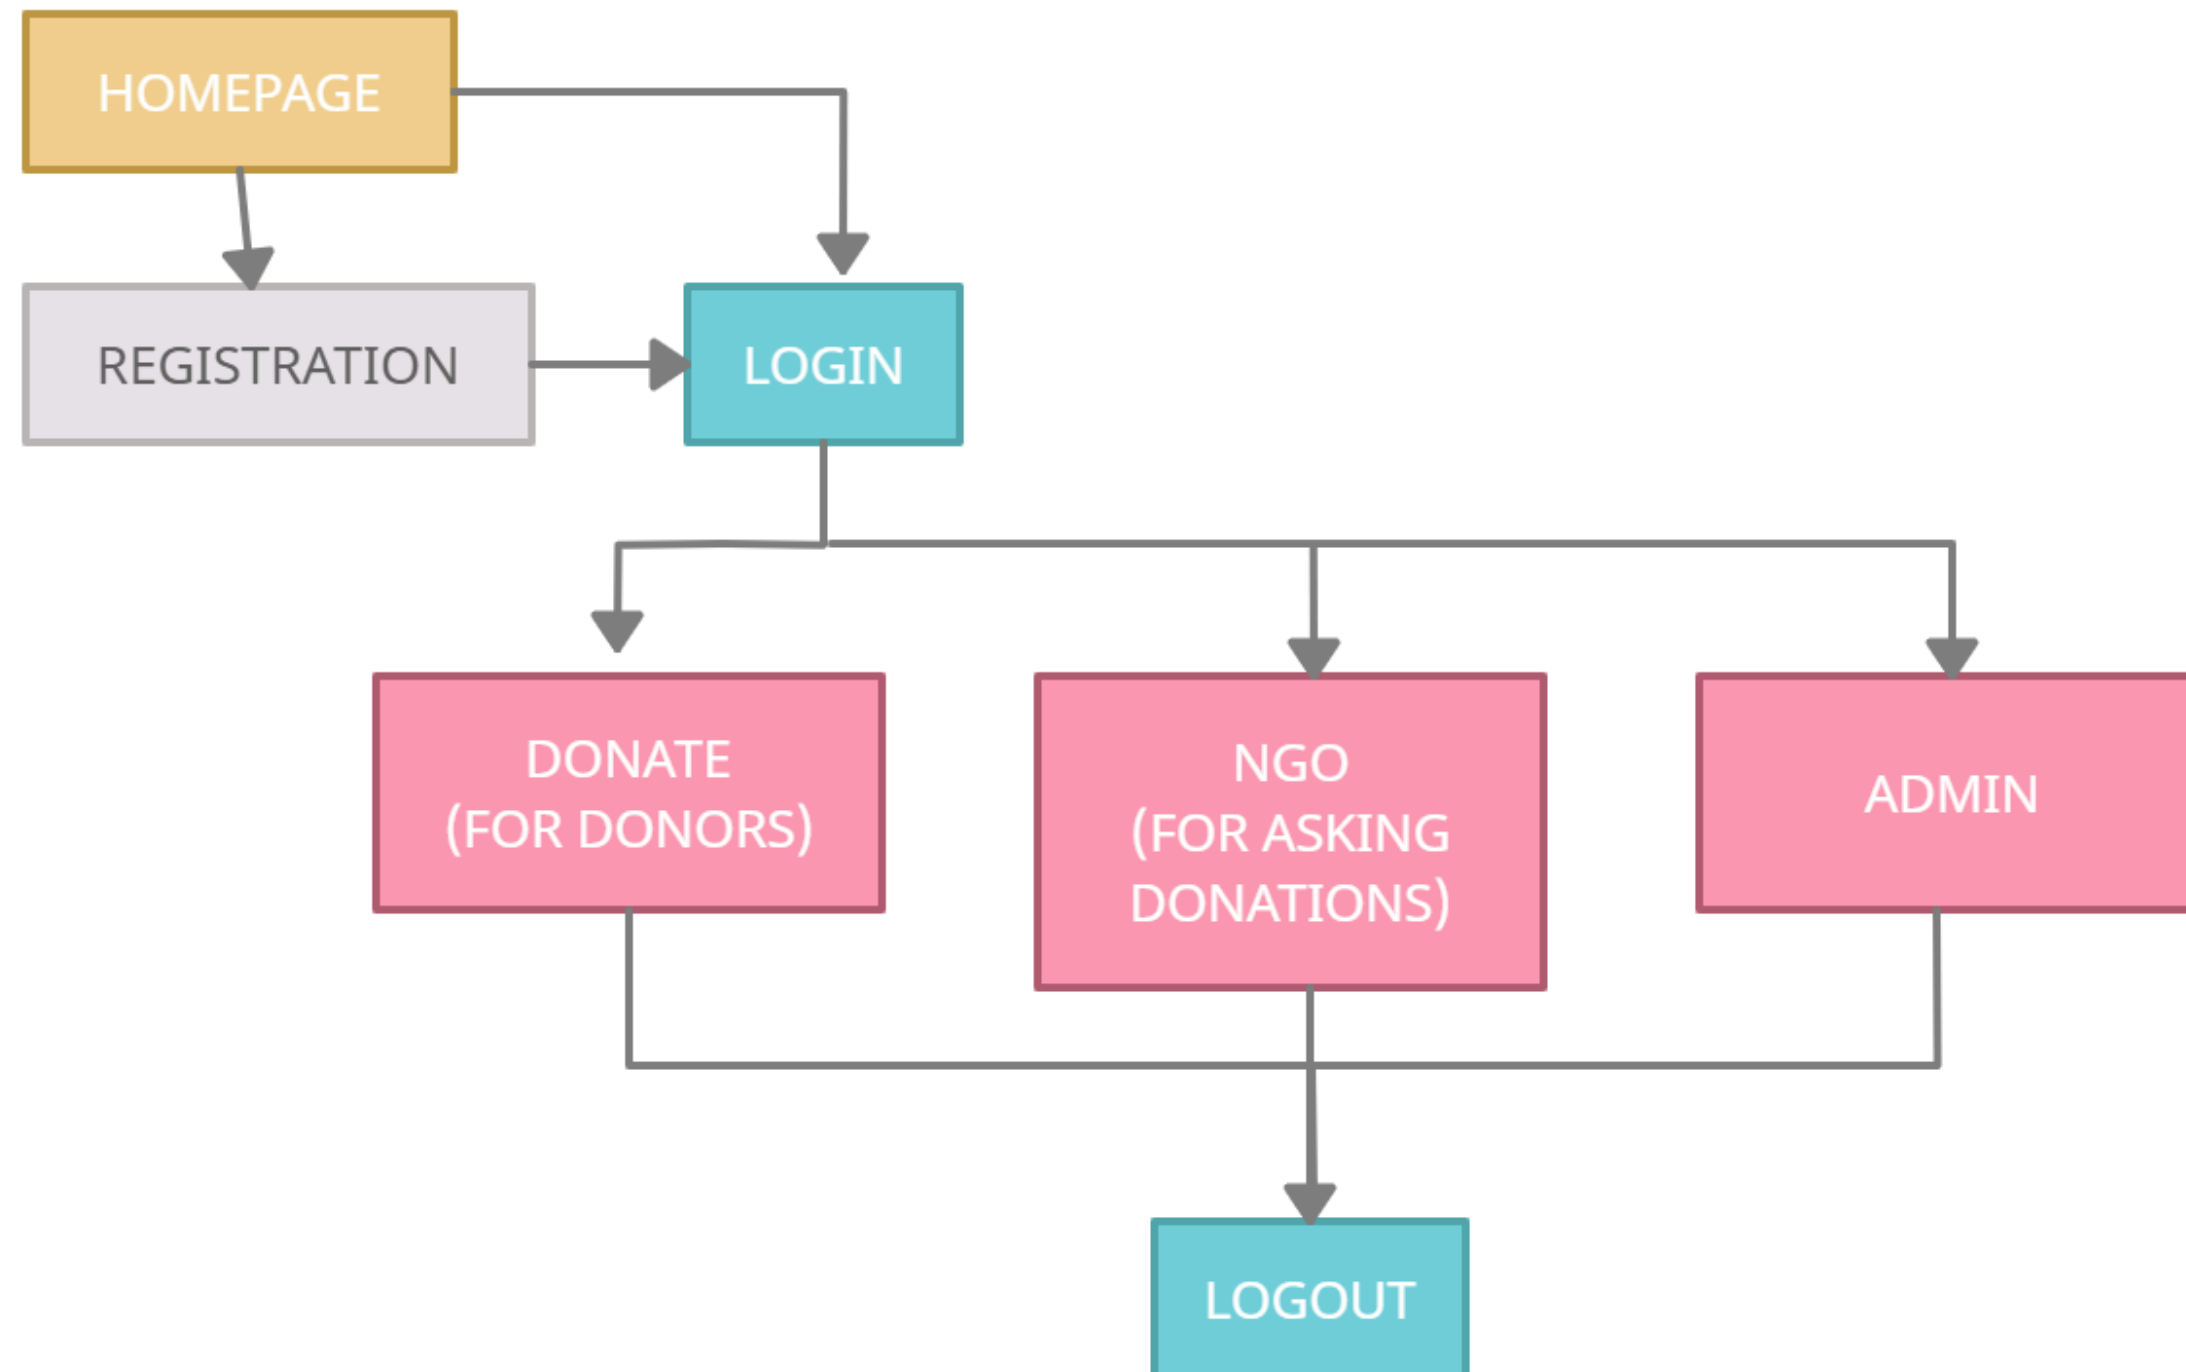

Proposed Methodology

- Our project aims to provide social services to all needy and poverty-stricken people using a website.
- Admin will be provided with login credentials and can verify NGO details.
- Donors as well as NGOs will register and create login credentials for themselves.
- Donors can donate and NGO's can ask for donation after verification.

User Case Diagram

Block Diagram

Hardware Requirement

1. PC with 250 GB or more Hard disk.
2. PC with 2 GB RAM.
3. PC with Intel Core i3

Scope

- There are many donation websites, however, what makes us different is that we enable our users to extend their helping hand in every possible way.
- Individuals can indulge in volunteering, donate for a specific cause at regular intervals and offer in-kind to organizations.
- Build one place wherein NGO's directly meet the donors with full transparency.

Conclusion

- The system overcomes almost all the issues we have discussed in the beginning.
- It's an easy-to-use and user-friendly system.
- But, it needs some better security measures and some more additional features.

THANK YOU !
